PROFESSIONAL SUMMARY

Aspiring Python Developer (AI/ML and Backend) with hands-on experience building end-to-end applications and machine learning systems using Python, Django, and Flask, backed by strong SQL (MySQL, PostgreSQL) data modeling skills. Developed and deployed machine learning models achieving up to 93.7% accuracy, integrating them into web applications from database design through deployment. Solved Python and SQL problems on coding platforms and participated in a HackerRank hackathon.

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL
- **AI / Machine Learning:** Scikit-learn, TensorFlow, Pandas, NumPy, Matplotlib
- **Backend & Frameworks:** Django, Flask, FastAPI, Streamlit, REST APIs, JSON
- **Databases:** MySQL, PostgreSQL, SQLite, MongoDB, DBMS
- **Data Structures & Algorithms:** DSA, Problem Solving
- **Core Concepts:** OOP, SDLC, Web Technologies
- **Testing & Tools:** Pytest, Postman, VS Code, MySQL Workbench, Git, GitHub
- **Cloud & Deployment:** Docker, GitHub Pages, Render, Vercel

EDUCATION

Ramireddy Subiramireddy Engineering College (RSREC) 2022 – 2026
B.Tech – Computer Science and Engineering (CSE) CGPA: 8.20
Sai Cooperative Junior College – Intermediate (MPC) 2020 – 2022 | 80.1%
St. Joseph EM High School – SSC 2019 – 2020 | 95.67%

INTERNSHIP EXPERIENCE

SkillDzire – Full Stack Intern Dec 2025 – Apr 2026
- Developed backend applications and RESTful APIs with MySQL for data persistence and business workflows.
- Followed SDLC practices using Git/GitHub for testing, debugging, and version control, and deployed applications on GitHub Pages and Render.

YBI Foundation – AI/ML Product Engineer Intern May 2024 – Oct 2024
- Developed Python-based machine learning models and integrated them into a Flask web application deployed on cloud infrastructure.
- Contributed across the SDLC, delivering features on schedule while debugging issues across the team's codebase.

PROJECTS

Crop Yield Predictor (Web App) | Python, Flask, TensorFlow, Scikit-learn, GitHub, Render
- Built a full-stack Flask web app that predicts crop yield from 12 user-input soil, weather and farm parameters, with an interactive dashboard showing real-time results.
- Trained deep learning regressors (DNN and LSTM) in TensorFlow and combined a DNN with an ExtraTrees model in an ensemble, reaching an R^2 of 0.96 and MAE of 0.09.
- Processed the FAO/Kaggle crop yield dataset with Pandas and NumPy, adding features such as soil pH, farm area, growing season and irrigation method.
- Added fertilizer recommendations with cost estimation based on soil composition, covering 5 major crops and 5 soil types.
- Improved training with batch normalization, early stopping and learning-rate reduction; followed SDLC from planning to testing, with code on GitHub and the app deployed live on Render.

Deepfake Video Detection (Web App) | Python, Flask, TensorFlow
- Built a web app where a user uploads a video and gets a real-time prediction of whether it is authentic or manipulated.
- Combined a CNN with frequency-domain analysis to catch visual and compression artifacts in video frames.
- Extracted key frames from each video, resized them to 224x224, and averaged predictions across frames for a stable score.
- Trained the model in TensorFlow on real and fake videos using a command-line training pipeline for custom datasets.
- Connected the model to a Flask backend so upload and prediction results appear on a web page.

TripPilot – Travel Planner | HTML5, CSS3, JavaScript, AI Tools (LLMs)
- Built a responsive travel-planning website that works on both mobile and desktop.
- Users can discover destinations, plan an itinerary, track their budget, make a packing list, and save trips.
- Saved trips persist in the browser even after closing the page.
- Connected live weather, location search and road routes.
- Used LLM-based AI tools to speed up development and debugging.
- Deployed the project on GitHub Pages.

CERTIFICATIONS

Software Engineer – HackerRank (Sep 2026) | SQL (Advanced) – HackerRank (Sep 2026)
Machine Learning with Python – IBM (edX) | Complete Python Bootcamp – Udemy
AWS Cloud Practitioner Essentials – AWS Training & Certification (Sep 2026)

ACHIEVEMENTS

- Solved 100+ coding problems across LeetCode, HackerRank, and other competitive programming platforms.
- Earned a 5-star rating in SQL problem solving on HackerRank and participated in the HackerRank Orchestra hackathon.
- Built and deployed multiple Python, backend, and AI/ML applications integrating REST APIs, databases, and machine learning models.
